## **DETAILED ACTION**

### ***Restriction/Election Requirement***

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

**Species A:** The following claims disclose different species with respect to the genus of mapping: i) data sets that are optically mapped, as in claim 47; ii) data sets that are ordered with polymorphic markers, as in claim 47.

**Species B:** The following claims disclose different species with respect to genus of polymorphisms: i) site-based polymorphisms, as in claim 51; ii) interval-based polymorphisms, as in claim 52.

The above species do not relate to a single-inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Regarding Species A, the technical feature linking the species appears to be mapping. However, the claims encompass different special technical features directed to optical mapping and polymorphic mapping.

Art Unit: 1631

Regarding Species B, the technical feature linking the species appears to be polymorphisms. However, the claims encompass different special technical features directed to site-based and interval based polymorphisms.

Accordingly, the disclosed species are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise require all the limitations of an allowed generic claim. Currently, the following claim(s) are generic: claims 41 and 44.

The claims are deemed to correspond to the species listed above in the following manner:

Species A: claim 47.

Species B: claims 51 and 52.

The following claim(s) are generic: claims 41 and 44

## 2. REQUIREMENT FOR UNITY OF INVENTION

As provided in 37 CFR 1.475(a), a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept (“requirement of unity of invention”). Where a group of inventions is claimed in a national stage application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression “special technical features” shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim. See 37 CFR 1.475(e).

### WHEN CLAIMS ARE DIRECTED TO MULTIPLE CATEGORIES OF INVENTIONS

As provided in 37 CFR 1.475(b), a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

- (1) A product and a process specially adapted for the manufacture of said product; or
- (2) A product and process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the said process; or

Art Unit: 1631

(5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

Otherwise, unity of invention might not be present. See 37 CFR 1.475(c).
